

DEEPER CLEANING WITH THE WOOD SOAP

For problems such as :

- Wax build up
- Dull or very dirty floor

Needed

- Wood soap
- Empty spray bottle
- Angel hair mop
- Bucket filled with clear and warm water

-
- 1- Pour 2" of wood soap into the bottom of the bottle and complete with warm water. It is important to shake often, because the soap must foam at all times.
 - 2- Spray a few floor slats at a time, there must be visible foam on the floor!
 - 3- Wash your floor in the direction of the wood slats. Always clean your floor with a well-wrung mop.
 - 4- Rinse the mop regularly to remove collected dirt.
 - 5- Change the water in the bucket as soon as it changes color to maximize this deep cleaner process.
As an example, for 300 ft² surface, the water should be change in between 3 and 5 time.
 - 6- Let your floor dry without rinsing it

Normally once you follow this procedure, your floor will return to its original state.
