

DEEPER CLEANING WITH THE WOOD SOAP

For problems such as :

- Wax build up
- Dull or very dirty floor

Needed

- Wood soap
- Empty spray bottle
- Angel hair mop
- Bucket filled with clear and cold or lukewarm water

-
- 1- Pour 2" of wood soap into the bottom of the bottle and complete with cold or lukewarm water.
It is important to shake often, because the soap must foam at all times.
 - 2- Spray a few floor slats at a time, there must be visible foam on the floor!
 - 3- Wash your floor in the direction of the wood slats. Always clean your floor with a well-wrung mop.
 - 4- Rinse the mop regularly to remove collected dirt.
 - 5- Change the water in the bucket as soon as it changes color to maximize this deep cleaner process.
As an example, for 300 ft² surface, the water should be change in between 3 and 5 time.
 - 6- Let your floor dry without rinsing it

Normally once you follow this procedure, your floor will return to its original state.
